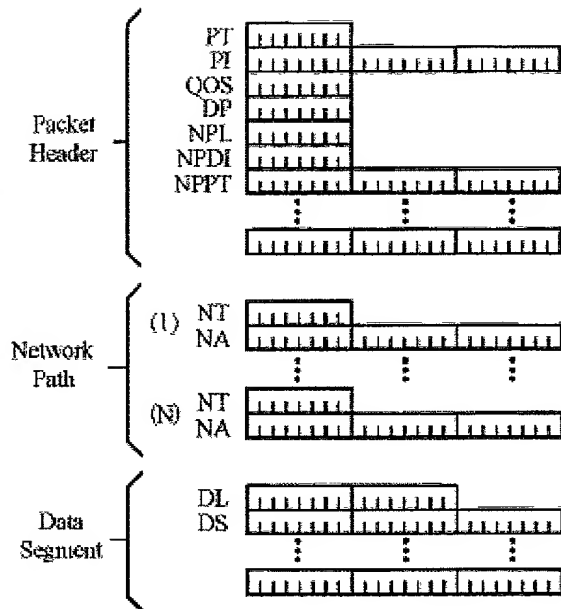

Fig 4

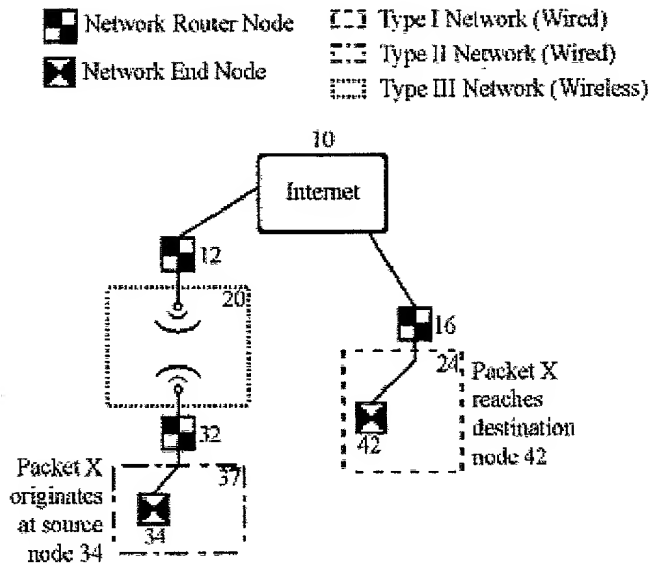

Figure 1 consists of seven sub-graphs labeled (a) through (g), each showing the plasma concentration of diazepam (mg/kg) over time (min) for three groups of mice: control (open circles), diazepam-treated (filled circles), and diazepam-treated with diazepam (filled squares). The graphs show that the concentration of diazepam in the plasma decreases over time, with the diazepam-treated group showing a faster decline than the control group. The diazepam-treated group with diazepam shows a further decrease in concentration.
